New Technology

There were many new inventions during the Roaring Twenties which helped shape the American's vision of the 1920s. The 1920s is remembered for having new technology and new inventions. Cars became immensely popular, and many people owned cars because Henry Ford made his Model T affordable for people with low budgets. There were also many new home appliances such as refrigerators, washing machines, and vacuum cleaners. New technology was a major part of what made the Roaring Twenties memorable.

New technology in the 1920s made people's lives easier and more efficient. The Model T allowed people to get to places faster. The radio was also invented in the 1920s which spread news quickly to people. Many people felt they were wealthy and economically stable so they purchased new technologies, making the economy profit skyrocket. The technological progress in America helped the economy and it helped America become a wealthy country in the world.

With the invention of the Model T, Henry Ford also created the assembly line which was one workers completed one task and perfected that task. That made things run much smoother in the production of automobile. The Model T cost roughly $260 in 1924, and by the end of the decade, cars were needed for people. Cars weren't just a new accessory for wealthy people, in 1929, there was enough cars to have one out of every five people owned a car.
